INFORMATIVE VIDEO ABOUT TEXTILE PRODUCTION AND WATER WASTE

Random facts about clothes: - 700 gallons of water is needed to produce a single T-Shirt! - Only 20% of textiles globally are recycled, the other 80% are lost in landfill. Well, 700 gallons of water is a lot! Imagine how much will be needed for one complete outfit. If we reuse our clothes and double their life from one to two years, this can reduce the harmful emissions with 24% per year.
